

AHLBRAND

BUGGY

## THE BUILT-TO-WEAR BUGGY

An elegantly finished high-grade buggy. When you buy an Ahlbrand Buggy or Phaeton you get the best. Twenty-five thousand miles on the same gear and wheels and still in use, is the record of a rural mail carrier out of Franklin, Ky. Ahlbrand buggies are stylish, they are comfortable and easy running. It's a pleasure to ride in an Ahlbrand Vehicle.

Chicago is asked to spend \$5,248,858 this year for street cleaning purposes.

## Unusual Offer To Our Readers.

For a limited time, and subject to withdrawal after 30 days, the well-known publishing house of the J. B. Lippincott Company, Philadelphia, founded in 1792, offers to the readers of this paper a 12 months' subscription to "Lippincott's Magazine" and a year's subscription to the Kentuckian, both for \$3.00. This is the price of a twelve months' subscription to "Lippincott's" alone. Additional to obtaining every issue of this paper for a year, our readers will receive in "Lippincott's," 12 great complete novels by popular authors, 105 short stories, crisp, entertaining, original 45 timely articles from the pens of masters, and each month some excellent poems with the right sentiment, and "Walnuts and Wine," the most popular humor section in America. To obtain this extraordinary offer prompt action is necessary. Remit to J. B. Lippincott Company, Washington Square, Phila., Pa.

## DAIRY FACTS

FOR BETTER BUTTER MAKING

Greater Attention Should Be Given to Details Concerning Factors Affecting the Quality.

(By J. KEITHLEY.)

Of the 994,650,610 pounds of butter which, it is estimated is made on the farms annually in this country, the greater part of it is of very poor quality. If any improvement is to take place and prove of profit to the farm butter makers, it is very necessary that more attention be paid to the details which go to make up the whole of this important work.

The fundamental facts and practices concerning butter making should be applied by the farmer as well as the creamery operator. This knowledge and its importance should be known in order that it be intelligently applied. Cleanliness and attention to details are the three prerequisites to the making of good butter. The main defects in farm butter show these three prerequisites to be very frequently neglected. These defects are:

1. Bad flavors.
2. Lack of uniformity in color and salt.
3. Unsuitable packages and no uniformity in the style of the package.

The bad flavors are due largely or entirely to the changes in the milk

Style of Milk Pail Good for Any Dairy.

and cream before it is churned, rather than to the subsequent treatment of the butter.

The importance of cleanliness cannot be overemphasized. In our haste to accomplish a task we often sacrifice our better judgment, only to learn that haste at that stage of the work necessitates a waste in time and labor at a later period. This is particularly true in handling milk and cream to be used for butter on farms. The bodies of the cows, the utensils, and the conditions at the barn, the milk room, and the storage room should all be clean. These are the primary factors which affect the cleanliness of milk and cream.

The utensils should be of such material and construction that they are easily cleaned and kept so. The interior should be smooth, with no cracks or crevices for dirt and milk remnants to find lodgment and be removed only with difficulty. The surface should be heavily tinned and the seams filled with solder. Tinware should be kept bright and perfect. As soon as any rust spots make their appearance an entrance is given into the soft iron for germs and small particles of decaying matter, which are, in consequence, removed with much more difficulty. The process of cleaning vessels which have contained milk should be:

First, to rinse them thoroughly in cold water, then in lukewarm water. Second, wash thoroughly with the aid of some good soap or cleansing powder in water as hot as the hand will bear. Third, thoroughly rinse in hot water. Fourth, expose to live steam from one to two minutes or to boiling hot water for five minutes in case steam is not available. Fifth, exposure, if possible, in bright sunlight from two to three hours.

In this way the tinware can be kept clean and bright and free from bacteria. Having thoroughly cleaned the vessels the prevention of access of dirt to the milk in process of milking is important.

## TREATING A SWOLLEN UDDER

Trouble is Often Caused by Permitting Cow to Lie on Cement Floor With Insufficient Bedding.

A caked or swollen udder is a common occurrence during calving season. It is often caused by allowing the cow to lie down on the cement floor with not enough bedding under her to keep her udder above the hard floor, whereby it becomes bruised or otherwise injured or congested.

The quickest and best remedy is to wash the udder very thoroughly with clean hot water, then rub it well for 15 or 20 minutes. The water should be as hot as the animal can stand. Use plenty of "elbow grease," as the rubbing is very important. Usually if the udder is not caked badly, one rubbing is sufficient to reduce the swelling, says a writer in an exchange. I have used a number of patent salves, but have found none equal to this treatment.

Sell Your Tobacco  
ON

AT ALL GOOD DEALERS 50¢ UP

The Secret of a Good Figure often lies in the braider. Hundreds of thousands of women wear the Bien-Jole Brassiere for the reason that they regard it as necessary as a corset. It supports the bust and back and gives the figure the youthful outline which fashion decrees.

**BIEN-JOLE BRASSIERES**

are the simplest, most serviceable garments imaginable. Only the best of materials are used—for instance, "Walcott," a flexible boning of great durability—absolutely rustless—permitting laundering without removal.

They come in all styles, and your local Dry Goods dealer will show them to you on request. If he does not carry them, he can easily get them for you by writing to us. Send for an illustrated booklet showing styles that are in high favor.
